Your contribution matters

Community gardens are proven biodiversity hubs.
Even small green spaces can host a surprising variety of plants, insects, birds and other animals — especially when they're cared for collectively.

Why biodiversity matters?
Biodiversity is in crisis. Species and habitats are declining fast due to land-use change, pollution, and climate impacts — reducing resilience in cities and beyond.

BIOmappers makes biodiversity visible.
Using apps like iNaturalist, gardeners and neighbours can document local species and turn everyday observations into shared knowledge.

We motivate people to act for nature.
By learning, mapping, and sharing, communities can take simple steps that create real benefits for biodiversity, fostering lifelong learning and environmental awareness.
